After passing the purposive sampling stage, the samples that are suitable for use are 22 companies (food and beverage) listed on the IDX. The analysis technique used is multiple linear regression analysis using IBM SPSS statistical application version 25. From the results of the F-test, it shows that the variables of liquidity, solvency and rentability together have an influence on financial performance, the results of the t-test research show that the liquidity and rentability variables have a positive and significant effect on financial performance.
